□□□□□□:

Handrails are essential for safety and accessibility in public buildings. They provide support for elderly and disabled individuals, reducing the risk of falls. Modern handrails are designed to be both functional and aesthetically pleasing, often made from durable materials like stainless steel. The curved design shown in the image is a common choice for its ergonomic benefits and sleek appearance.

- Handrails are made from stainless steel
- Handrails are made from aluminum
- Handrails - stainless steel 1 inch
- Handrails are made from wood
- Handrails are made from plastic
- Handrails are made from glass
- Handrails are made from fabric
- Handrails are made from metal
