

Specifications:

Name	Simple type double decker bicycle rack
Model Number	PV-HL04
Material	Steel/Carbon steel
Color	Red/Customization
Capacity	Park 4 bikes
Product Size	W1950*D1850*H1270mm
Pipe Size	Dia.50*t2.0mm
Finish	Powder coated

Features & Application:

[Double-decker bicycle racks](#) typically consist of a sturdy framework with multiple levels or tiers of horizontal bars or slots. Bicycles are parked by lifting them onto the upper tier or level, while the lower tier remains empty or is used for parking larger or non-traditional bicycles. These racks often feature a mechanism, such as a pulley or hydraulic system, to assist with lifting and lowering bikes onto the upper

tier. Some racks may also have individual locking mechanisms or integrated bike locks to secure each bicycle in place.

Double-decker bicycle racks are commonly found in densely populated urban areas, transportation hubs, bike-sharing stations, and other locations where space is limited and high bike capacity is required. They offer an efficient solution for maximizing bike parking in constrained areas while maintaining a secure and organized environment.It's worth noting that the specific design and features of double-decker bicycle racks can vary. Some racks may have an inclined or angled structure for easier bike parking, while others may incorporate additional elements such as shelter or weather protection.

Features	1.Space saving to park four bikes easily.
	2.Removable and assemble,easy to transport.
	3.Elegant appearance,popular in the world market.
	4.Custom-made for specific sites.
	5.Easy-to-use,safe and organized parking.
	6.Manufacturer double bike rack also can be OEM and ODM.
	7.Double bike rack can save more space to park more bikes
	8.Lifetime Warranty
Application Scope:	Park,Campus,Hospital,Scenic region,Outdoor places Etc.
