□□ □□:

Handrails are essential for safety and accessibility in public buildings, hotels, and homes. They provide support and stability for people with limited mobility, the elderly, and children. Handrails are typically made of stainless steel, aluminum, or wood. They are installed in a variety of locations, including stairs, ramps, and corridors. Handrails are also used in public transportation, such as buses and trains, to help passengers maintain their balance. Handrails are a simple but effective way to improve safety and accessibility in any building.

- Handrails are made of stainless steel, aluminum, or wood.
- Handrails are installed in a variety of locations, including stairs, ramps, and corridors.
- Handrails are used in public transportation, such as buses and trains, to help passengers maintain their balance.
