Description:

Model	PV-0107-01
Pipe Size	DIA48*2.0 DIA100*2.0
Product size	680*900mm(W*H)
Net Weight	12kg
Surface Treatment	Galvanized, powder coat, or stainless steel finish.
Packing	carton box(can be custom)
MOQ	100PCS
OEM	Yes

Benefits of Secure Bike Parking With Bollards :

- **Bollards** provide an added layer of security for bicycle parking areas. By creating a physical barrier between the bike parking area and vehicle traffic, bollards reduce the risk of theft, vandalism, and accidental damage to bicycles. Bollards can also be used to prevent vehicles from entering the bike parking area, ensuring that bicycles are not damaged by vehicle collisions.
- Secure bike parking with bollards promotes cycling as a sustainable mode of transportation. By providing a safe and secure place to park bicycles, public spaces can encourage people to cycle to their destination. This reduces traffic congestion, promotes environmental sustainability, and supports a culture of active living that benefits the health and well-being of the community.
- Secure bike parking with bollards can accommodate different types of bicycles, including cargo bikes, touring bikes, and electric bicycles. This is important for public spaces that attract a diverse range of cyclists with different cycling needs.
- Secure bike parking with bollards provides a convenient parking option for cyclists. By locating bike parking areas close to the entrance of public spaces, cyclists can easily access their destination without the need for long walks or searches for parking.
- Bollards can be designed to complement the surrounding environment, making them an attractive addition to public spaces. They can be made from a variety of materials, including stainless steel, aluminum, and wood, and can be painted or finished to match the surrounding landscape.
- **Secure bike parking with bollards** provides space efficiency by allowing for compact bike parking. Bollards can be spaced closer together than traditional bike racks, allowing for more bicycles to be parked in a smaller area.
